

Temă specială: taijitu

<https://en.wikipedia.org/wiki/Taijitu>

Următorul program desenează un taijitu clasic:

```
import ComplexPygame as C
import Color
import math

def Taijitu_01():
    def UnSemiDisc(q, r, sens, col):
        # q:centru, r:raza, sens: stanga sau dreapta, col:culoarea
        for z in C.screenAffixes():
            if sens == "stg" and z.real > q.real:
                continue
            if sens == "drp" and z.real < q.real:
                continue
            if C.rho(z - q) < r:
                C.setPixel(z, col)

    a = 6.1
    C.setXminXmaxYminYmax(-a, a, -a, a)
    Alb = Color.White
    Negru = Color.Navy
    C.fillScreen(Color.Cyan)
    UnSemiDisc(0, 6, "stg", Alb)
    UnSemiDisc(0, 6, "drp", Negru)

    UnSemiDisc(3j, 3, "drp", Alb)
    UnSemiDisc(-3j, 3, "stg", Negru)

    UnSemiDisc(3j, 1, None, Negru)
    UnSemiDisc(-3j, 1, None, Alb)

if __name__ == '__main__':
    C.initPygame()
    C.run(Taijitu_01)
```

Tajitu_01 : complet
